Runway Status Lights at Boston (BOS)

Your feedback is important! Take the pilot survey at: www.RWSL.net

Refer to the FAA graphic NOTAM and ATIS for current operational status.

Runway Status Lights (RWSL) turn on and off automatically, driven by multi-sensor surveillance. RILs turn ON when it is unsafe to enter or cross a runway; RILs are visible from taxi hold position. THLs turn ON when it is unsafe to depart from the runway; THLs are visible from takeoff hold position (and final approach). RILs turn ON when it is unsafe to cross a runway intersection; RILs are visible from approximately 3500 feet prior to runway/runway intersection and may be visible from final approach.
